Key words: tree-drawing test, Y-G personality inventory, personality projection

Abstract

In order to examine what kind of personality traits could be reflected to what kind of indices of projective drawing, the Y-G (Yatabe-Guilford) personality inventory and the Koch's Baumtest (Fruit Tree Drawing) were administered to 85 freshmen of a women's junior college. Y-G Scales for Emotional Stability (negative) (D, C, I, N) tend to be reflected in such indices as the lack of fruit or the right-left ratio (the right side/overall width of the tree) ; scales for Sociability (negative) (O, Co, Ag) , in drawing a landscape or in the width of left side blank space ; Impulsiveness (G, R) , in the height of the tree or in the width of lower side blank space ; Reflectiveness (R, T) , in the tree standing out directly from the lower edge of the sheet ; Dominance (A, S) , in forms of the top, simply opened or spread into more than two branches, the former being related to higher dominance, the latter to lower dominance. It was concluded that some indices of the tree-drawing test (Baumtest) could reflect some personality traits measured on Y-G scales.

要約

85人の女子短期大学生に、Y-G性格検査とバウムテストを施行し、客観的バウム指標とY-G尺度

との対応関係を調べた。その結果、情緒不安定性(D,C,I,N)が実や冠中果の描写のないことや左右比の大きさ(右側の割合が大)に表われる傾向があること、社会的不適応性(O,Co,Ag)が背景の描写や左辺空間の大きさに表われる傾向があること、衝動性(G,R)が下部空間の狭さと樹高に表われる傾向があること、非内省性(R,T)は下縁立に表われる傾向があること、主導性(A,S)が軒端の解放および放散に表われ、前者は主導性の低いことを、後者は主導性の高いことを表す傾向があることなどがうかがわれた。
